Our Work.

Translate House
Translation Engineering

Our team helped Translate House develop and improve a Translation Service solution. Over the course of a year, we were able to assist Translate House in designing their Software-as-a-Service solution and restructure their technical operations to be compatible with their new ideas.

Built with open source technologies, and open source to its core, the resulting web-based translation software Pootle software offers a world-class translation utility to companies and large operations such as Mozilla, Evernote, and the OpenOffice and LibreOffice suites.

*Case Study #1: Software Architecture
for a Data Analytics Solution*

In collaboration with the Federal Police and the Federal Public Service
for Mobility and Transport in Belgium, Goveni assisted VIAS end-to-end
on the project of a public Road Safety Barometer.

Built on top of Amazon Web Services QuickSight Technology, the Road
Safety Barometer allows public service employees to query highly-
scalable amounts of data, quickly iterate on dashboard designs to
analyze it, and easily publish them for the world to see.

Goveni handled all the technical design, issues, and operated closely
with Amazon Web Services' QuickSight team to build the product,
using the technology in new and innovative ways.

# VIAS Institute for Road Safety

Case Study #2: Cyber Security Consulting

VIAS enlisted the services of Goveni's top security experts to ensure the viability and security of their users' data on a complex AWS-based Kubernetes operation.

Goveni developed Disaster Recovery systems for VIAS and established Fire Drill Protocols to ensure their continuous viability and proper training of all employees.

If this interests you, we offer services such as information security governance, auditing, risk management, protection from cyber threats and more.
